STATE OF TENNESSEE
DEPARTMENT OF EDUCATION
COUNCIL ON VOCATIONAL – TECHNICAL EDUCATION

Fourth Floor, Andrew Johnson Tower
710 James Robertson Parkway
Nashville, TN 37243
615/741-2197

March 1, 2005

Dear Tennesseans:

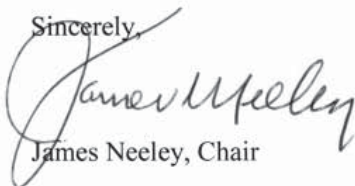

The Tennessee Council on Vocational Education is pleased to present this inventory of Career and Technical Programs in Tennessee. We trust the report will be of benefit to local chambers of commerce, economic development agencies, educational institutions, school counselors, students, parents, and others seeking information on the availability of Career and Technical education in our state.

Tennessee has a range of opportunities in Career and Technical Education available beginning in high schools and proceeding through Post Secondary. These opportunities are available for initial training and job entry skills, continuing education, upgrading skills, and retraining of those who have already entered the work force.

We hope you will use this information and that it will serve as one of the vehicles to enhance the knowledge and utilization of the available resources that exist in Tennessee and thereby contribute to Economic Development and the income of Tennesseans.

The Council is appreciative for the support of the Tennessee General Assembly, the State Department of Education, and the State Boards of Education and Regents in the disposition of the responsibilities of the Council.

Sincerely,

James Neeley, Chair

About TCOVE

The Tennessee Council on Vocational-Technical Education (TCOVE) consists of 13 members appointed by the governor to serve in an advisory capacity to the Tennessee Board of Education, Tennessee Board of Regents, the governor, and the general assembly. Members of the council are appointed to serve terms of six years.

Seven individuals are representatives of the private sector in the state and constitute a majority of the membership. Six individuals are representatives of secondary and post-secondary vocational institutions, career guidance and counseling organizations within the state, and/or individuals who have special knowledge and qualifications with respect to the educational and career development needs of special populations.

Duties of the Tennessee Council on Vocational-Technical Education are:

1. To meet with the Tennessee Board of Education or its representatives during the planning year to advise on the development of the state plan.
2. To advise the Tennessee Board of Education and make reports to the governor, the business community, and the general public of the state.
3. To analyze and report on the distribution of spending for vocational education in the state and on the availability of vocational education activities and services within the state.
4. To furnish consultation to the Tennessee Board of Education on the establishment of evaluation criteria for vocational education programs within the state.
5. To submit recommendations to the Tennessee Board of Education on the conduct of vocational education programs within the state.
6. To assess the distribution of financial assistance furnished under Tennessee laws, particularly the analysis of the distribution of financial assistance between secondary and post-secondary vocational education programs.
7. To recommend procedures to the Tennessee Board of Education to ensure and enhance the participation of the public in the provision of vocational education at the local level within the state.
8. To report to the Tennessee Board of Education on the extent to which individuals are provided with equal access to quality vocational education programs.

Background

In the course of preparing a number of documents for the Tennessee Council on Vocational-Technical Education, researchers relied on a variety of excellent published and internet resources. Utilizing these resources made it possible to construct a complete picture of the specific area under investigation, yet research also revealed holes in the information available in certain areas. Researchers would frequently find themselves imagining “wouldn’t it be nice if someone had put together an inventory on” Since much of the work involved a focus on Tennessee, absences in state and local information became particularly apparent.

In preparing the report *Technical, Vocational, and Career Education: Alternative Strategies to Reduce the Dropout Rate* (Harrison, 2004), researchers found excellent individual resources for vocational, technical and career education, but missing was a document that compiled the disparate pieces of information for easy and ready access. Thus, the need was realized for a Tennessee resource guide that identified secondary and post-secondary vocational, technical and career education state offices, departments, and programs in the various institutions across the state.

Objectives of the Directory

This document, *Resource Guide to Vocational-Technical Education in Tennessee 2005-2006, Volume II. Secondary School Programs*, is a companion document to *Resource Guide to Vocational-Technical Education in Tennessee 2005-2006, Volume I*. This second volume includes contact and curriculum information for secondary schools across the state offering vocational-technical programs.

Resource Guide to Vocational-Technical Education in Tennessee 2005-2006, Volume I. Post Secondary Institutions and Agencies was prepared to be a single source for introductory vocational, technical and career education information in Tennessee. The document was designed to be a welcome center or entry portal. As noted in the letter from the council, the guide was designed to be used by chambers of commerce, economic development agencies, educational institutions, school counselors, students, parents, potential employers and others interested in this area. An added benefit of the directory is the provision of an overview or profile of the current landscape of secondary and post-secondary vocational, technical and career education across Tennessee.

Outline of the Document

As shown in the contents, secondary school vocational, technical, and career courses offered in each institution throughout the state are illustrated along with school contact information. The final piece in the document is the program matrix for secondary schools segmented by local workforce investment areas.

Limitations

This document was constructed to maximize usable information and to minimize error. Researchers determined that one way to accomplish these goals was to provide public information that was available directly from the website of the agency, institution or department. Therefore, the correctness and accuracy of the information is only good to the extent that the information is correct and accurate on the website. Changes to that information occurred only when errors were identified through word processing software.

Readers may notice a few spacing irregularities. These were left in the document intentionally because some web-based formatting would override word processing software layout if the block of information was moved. Also, in some instances, graph formatting could not be undone and, if moved, created ghost text in the narrative sections or overrode or replaced manuscript.

It goes without saying that these types of documents are dynamic. Directories, resource guides and resource inventories begin to be outdated the day the preparation of the document begins. Contact information changes routinely. Programs, course offerings, and costs change or are altered by legislation or through new regulations. However, the bulk of the information is usable. This resource guide will be updated daily on the TCOVE website, and the hard copy will be updated and published every two years.
